PROJECTS

EMS Tracking System (Angular v13/ .net core) (04/2023 - Present)

- Tracking system controls all the aspect of manufacturing process. It is used to facilitate all assembly, tests, software revisions, build routes and dispatch controls for all approved products.
- It generates all Ident labels (utilizing Bartender) & documentation for dispatch and allows full traceability. Tracking system interlinks with EFACS ERP system and utilizes barcode labels which are generated from distinct Ident pools.

CPQ (Mvc .net/ C#/ Web Api/ Json) (01/2022 - Present)

- SAP CPQ, it is a tool that can configure product prices and calculate the total price. Implemented and updated application modules under the direction of Specialist - Software Engineering. Developing Enhancements, Deployments, Bug fixes as per client requirement.
- Developed Single Sign On in application, this functionality allows users to access the application using their existing credentials, eliminating the need for multiple logins and enhancing user experience and also developed various forms for suppliers and users.

Carrier India Webapps (Mvc .net) (01/2022 - Present)

- Carrier India Web portal has multiple applications that are used by Carrier users for different purposes. This portal includes below mentioned applications.
- APMS (Application Payable Management System) - This application is used to submit different types of bills and track status of bill processing like approvals and payment.
- E Receipt- This application is used to record the amount collected against the Invoice from customer across all the branches.
- Web Apps -This application is used for user to track the National account Bills, as Pinnacle Tracker, Track Bank Guarantee requests and e-POD.

Thathastu- Client project (Web API) (03/2019 - 09/2021)

- Thathastu is an E-commerce system to online shopping for all fashion and lifestyle products. It provides hassle free enjoyable shopping experience to shoppers the country with the widest range of brands products on its portal. Debugged Code and located root cause of problems by reviewing configuration files and logs. Worked closely with other business analysts, development teams and infrastructure specialists to deliver high availability solutions for mission-critical applications.

Event Space Management System (Asp .net) (08/2018 - 02/2019)

- The Event Space Management System is a web application developed using the .NET framework designed to streamline the management of event spaces. The system includes two primary roles: Admin and User.
- The system offers a responsive and intuitive user interface, making it easy for users to book event spaces and for admins to manage them. Users and admins receive real-time updates on booking statuses via email notifications. The application includes authentication and authorization features to ensure secure access to different functionalities based on user roles.

ACHIEVEMENTS

Received Appreciation from the Clients for hard working and dedicated to work and have the utmost confidence in the entire development process.
